DSR-669 DEV migration report

Oct 23, 2026 · @Martin

DSR-669 is live on DEV: the CF related models are now `DM_*_dsr`, all 84 DSR CFs were migrated, the 78 live ones republished, and every existing overlay page regenerated. QA can start the regression.

Released

Two PRs went to DEV together for DSR-669. DSR-670 (#109) was merged at 07:50 UTC, and its DEV deploy is running.

PR	Repo	Scope	Merged (UTC)
#108	dsr-fullstack	DSR-669: models `dm_*_related` → `dm_*_dsr`, 8 persisted queries, DAM policy, CF editor config. DSR-671 items 1–5: `hubspotFormId` and `promoText` on `DM_catalog_dsr` and in `dsr-catalog-page`, `productLabel` = `{productId} | {productName}`, `relatedMoodboards` removed	2026-10-23 06:49
#212	dsr-eds	DSR-669: overlay allowlists, product and video detail blocks, gap-check, docs	2026-10-23 07:15
#109	dsr-fullstack	DSR-670: `DM_techmovie_dsr` and `dsr-techmovie-page`	2026-10-23 07:50 (DEV deploy running)

Steps run on DEV

Every step finished without a failure. Times are UTC, 2026-10-23.

Time	Step	Result
06:50	DSR Dev Deploy (Cloud Manager) after #108	DEV publish serves `DmMovieDsrModel`; `DmMovieRelatedModel` is gone; `DM_catalog_dsr` has `hubspotFormId` and `promoText`
07:24	Overlay config applied to `dsr-eds-dev` / `main` (video, product, catalog)	The 12 overlay folders (ja / en / cn) allow their `dm_*_dsr` model; json2html has the repo's 21 entries; reserved-check OK
07:30	Migration report (read only)	84 CFs under `/content/dam/dsr`, all on old models, no unknown model
07:32	Migration (`cq:model` only)	84 migrated, 0 failed; report after: 0 changes left
07:33	Test republish of `ja/movies/standard/qa587-main`	Page regenerated 6 s later on preview and live, same content
07:37–07:39	Republish of every live CF	78 republished, 6 unpublished skipped, 0 failed
07:39–07:44	Page check	All 55 existing overlay pages regenerated

CF migration

All 84 CFs under `/content/dam/dsr/` now point to a `dm_*_dsr` model, and each still resolves its CF commune on author.

Language	Folder	Model after	CFs
en	movies/standard	`dm_movie_dsr`	30
en	catalogs	`dm_catalog_dsr`	18
en	products	`dm_product_dsr`	4
ja	catalogs	`dm_catalog_dsr`	15

Language	Folder	Model after	CFs
ja	products	`dm_product_dsr`	10
ja	movies/standard	`dm_movie_dsr`	7

- **QA data:** 61 of the 84 CFs are QA items (`qa*` and `99058xxxx`), all migrated.
- **No tech talks on DEV:** `movies/tech/` holds no CF in either language, so DSR-670 needs no tech talk migration unless some are created first.
- **Not republished (6):** these CFs were not live before, so they stay unpublished: `en/catalogs/qa654-preview` , `en/catalogs/qa654-removed` , `en/movies/standard/qa587-preview` , `en/movies/standard/qa587-removed` , `ja/products/990586002` , `ja/products/990586011` .

Overlay pages

All 55 overlay pages that existed before regenerated within 5 minutes, on preview (`aem.page`) and live (`aem.live`); one page is still missing on live.

Result	Pages	Detail
Regenerated, same content	35	Only the per-request script nonce differs
Regenerated, content changed	20	The 16 `qa190-cat-*` catalogs (ja and en), `qa557-youku` (ja and en), `en/products/990586001` , `ja/products/qa586-alpha` . Spot-checked pages now match publish GraphQL exactly.
Newly on live	22	Older test items that were on preview only before: `badid` , `noid` , `sort-*` , products `135` / `46` , `catalogid-02` , and others
Still 404 on live	1	`ja/library/catalog/catalogid-01` : fine on preview, data correct on publish

- **Why 17 of the changed pages differ:** applying the overlay config at 07:24 rebuilt them while their CFs were still on the old models, so they briefly rendered without data. The republish restored them. The other 3 (`en/qa557-youku` , `en/products/990586001` , `ja/products/qa586-alpha`) were last built on 10-22 or early 10-23. Edits to their CF commune since then are the likely cause; not confirmed.

- **URLs:** pages follow the overlay paths, not the DAM folder names: `/{lang}/library/video/{movieId}`, `/{lang}/products/{productId}`, `/{lang}/library/catalog/{catalogId}`. The video list is `/{lang}/library/video/search`. `/ja/movies/{id}` is not a page.
